FROM RAW DATA TO BUSINESS DECISIONS

I help market research agencies turn raw datasets into client-ready, decision-grade reports through advanced analytics and structured insight development.

WHAT I DO?

- 01 Transform raw data into analysis-ready datasets**
- 02 Identify statistically significant insights across segments**
- 03 Build analytical models to uncover key drivers**
- 04 Develop client-ready reports with business recommendations**

WHAT YOU GET?

Faster Delivery

Structured workflows and efficient data processing — less back-and-forth, more output

Decision-ready insights

Not just tables and numbers — clear narrative with actionable conclusions per objective

Fewer revision cycles

Strong analytical logic and storytelling reduces the need for rework from day one

Consistent quality

High-quality outputs aligned with client expectations — every project, every time

PROVEN TRACK RECORD

- 200+ analytical reports delivered across multiple industries
- Experience across multi-market projects and diverse datasets
- End-to-end support from data processing to final insight delivery

ANALYTICAL CAPABILITIES

- SPSS – advanced modeling (crosstab analysis, regression, segmentation)
- Excel / Power BI – reporting automation, dashboards, and data visualization
- Data QC frameworks – logic checks, consistency validation, data cleaning workflows
- End-to-end data workflows – from raw dataset to final report delivery

SERVICES

Data analysis & reporting
for market research agencies

RESEARCH QA

**Ensuring data quality
and fieldwork accuracy**

- Mid-field data checks
- Interview quality validation
- Issue flagging & correction

STATISTICAL ANALYSIS

**Identifying statistically valid
insights and key drivers**

- Significance-tested insights
- Driver & impact analysis
- Customer segmentation

INSIGHT & REPORTING

**Decision-ready insights with
clear business implications**

- Insight-driven PPT
- Executive summary
- Business recommendations

RESEARCH DESIGN

**Designing structured,
KPI-driven research frameworks**

- Questionnaire design
- Survey Structure & Logic
- KPI-driven research frameworks

RESEARCH PROCESS

Structured to deliver clear, reliable and decision-ready insights

1

Objective Alignment

Defining business objectives and translating them into clear, measurable research questions

2

Research Design

Designing robust research frameworks and questionnaires aligned with strategic objectives

3

Quality Control

Ensuring data accuracy through rigorous validation, quality checks and fieldwork supervision

4

Data Processing

Transforming raw data into structured, analysis-ready datasets and extracting meaningful patterns

5

Reporting & Insights

Delivering actionable insights and strategic recommendations to support business decisions

- Not just process — a framework focused on insight quality and decision impact

SHOPPER SEGMENTATION FOR A LEADING RETAIL CHAIN

Industry: Retail / FMCG · Market: Azerbaijan · n = 2,100 respondents · Method: K-means clustering, SPSS

Deliverable

4-segment model with personas, driver analysis & recommendations per segment

Approach

K-means clustering on behavioral, attitudinal & demographic variables in SPSS

Challenge

No structured view of customer base — marketing applied uniformly across all shoppers

Segment 01

Balanced but not passionate

12.4%

260 respondents

CSAT 8.8 · NPS +35
Avg. spend: 434 AZN
53% shop daily

"It works well enough, so I continue using it"

Segment 02 ★ Core

Value-Conscious Loyalists

67.0%

1407 respondents

CSAT 9.5 · NPS +72
Avg. spend: 380 AZN
Strong promoters

"I care about everything, and this supermarket delivers"

Segment 03

High Value Mission Shoppers

4.7%

99 respondents

CSAT 8.3 · NPS +12
Avg. spend: 471 AZN ↑ highest
Task-oriented, low engagement

"I come, buy what I need, and leave"

Segment 04 ⚠ Risk

Price-Sensitive Dissatisfied

15.9%

334 respondents

CSAT 6.9 · NPS -85
Avg. spend: 400 AZN
Extreme detractors

"I spend a lot, but don't feel I get enough in return"

Key Findings

- 67% of customers are loyal & satisfied — retention is the #1 priority
- Seg 4 spends 400 AZN but NPS -85 — urgent churn risk
- Seg 3 holds highest basket value despite low emotional engagement

Strategic implications

- Focus retention strategy on core segment (67%) to maximize loyalty ROI
- Address churn risk in Seg 4 through pricing transparency and targeted offers
- Optimize communication for Seg 3 based on functional shopping behavior

MULTI-STAGE FW SUPERVISION & DATA VALIDATION

Industry: Telecom · Market: Baku, Azerbaijan · Interviewers monitored: 22 · Method: On-site checks · Audio review · Data QC

Challenge

Client had no internal capacity to validate interviewer quality or detect data inconsistencies during fieldwork

Scope

3-layer QC: on-site supervision, audio back-checks and post-collection data consistency analysis

Deliverable

Structured feedback report per interviewer + flagged dataset with corrective action log

On-site supervision

- Physical presence at interview locations in Baku
- Real-time observation of interviewer technique and respondent interaction
- Immediate correction of quota deviations and script violations

Audio back-check

- Random sample of recorded interviews reviewed per interviewer
- Checked for correct question wording, skip logic and neutral probing
- Written feedback delivered to each interviewer with scored evaluation

Key Findings

- Response pattern anomaly: 3 interviewers showed near-identical answer sequences — flagged as potential straight-lining, interviews removed
- Logical inconsistency: 8.4% of records had contradictory responses between usage and satisfaction questions — corrected or excluded
- Audio check: 2 interviewers skipping sub-questions — corrective briefing conducted, affected records re-fielded

What the client received

- Per-interviewer performance report with scored evaluation criteria
- Flagged dataset with issue log — each record marked clean, corrected or excluded
- Recommendations for interviewer briefing in future waves

CUSTOMER SATISFACTION QUESTIONNAIRE FOR A LEADING BANK

Industry: Banking · Mode: CAPI + Online · Final length: 44 questions across 5 modules · Pilot: n = 50

Challenge

Existing questionnaire was too long, poorly structured and not measuring actual satisfaction drivers

Approach

Objectives translated into measurable questions. Modular architecture with routing by product usage

Deliverable

Final QNR with pilot report, revision log and interviewer briefing guide

What changed after pilot

- 2 questions reworded — respondents misread double-barreled phrasing
- 1 scale anchor adjusted — "neutral" was being confused with "not applicable"
- Interview time reduced from 22 to 16 min without losing analytical depth

• Pilot test results — n = 50

16 min
Avg. completion time

4 Questions revised after pilot

96% Pilot completion rate

CHOOSE THE RIGHT LEVEL OF INSIGHT

All packages include structured data processing and professional delivery

STARTER

Basic Analysis

For quick understanding of survey results

- ✓ Statistical analysis (crosstab, key comparisons)
- ✓ Initial insight extraction
- ✓ Key findings summary

MOST POPULAR

Insight Report ★

For clear, decision-ready insights

- ✓ Full statistical analysis
- ✓ Key driver identification
- ✓ Basic segmentation
- ✓ Insight-driven PPT report
- ✓ Actionable recommendations

PREMIUM

Insight & Strategy

For deeper understanding and strategy

- ✓ Advanced analysis & deeper cuts
- ✓ Structured segmentation & profiling
- ✓ Executive-ready insight report
- ✓ Insight-driven PPT report
- ✓ Clear business implications & actions
